PROFESSIONAL SUMMARY

Associate Software Engineer with 1 year of experience in Application Support (L2 Monitoring), specializing in production monitoring, incident management, system operations, Linux/Windows troubleshooting, Shell Scripting, Grafana monitoring and PostgreSQL database support. Strong foundation in AWS, Docker, Git, Python and SQL with ongoing learning in Kubernetes and Ansible. Seeking an Associate DevOps Engineer role.

PROFESSIONAL EXPERIENCE

Associate Software Engineer – Application Support (L2 Monitoring)

Circana, Inc. | August 2025 – Present

- Monitor production applications, servers and system health using Grafana dashboards.
- Perform L2 production monitoring by analyzing alerts, emails and notifications within SLA timelines.
- Execute shell scripts to start, stop, restart and manage application models and profiles.
- Troubleshoot Linux and Windows application/server issues.
- Monitor logs, investigate incidents and support root cause analysis.
- Use DBeaver with PostgreSQL for data validation, SQL execution and issue investigation.
- Collaborate with development and infrastructure teams to ensure smooth production operations.
- Maintain operational documentation and troubleshooting procedures.

EDUCATION

Bachelor of Computer Applications (BCA)

SDC Degree College, Bengaluru North University

CGPA: 9.1 | August 2024

PUC - Mahila Samaja PU College | 87% | July 2021

SSLC - Mahila Samaja High School | 82.5% | April 2019

TECHNICAL SKILLS

Operating Systems: Linux, Windows

Cloud: AWS (EC2, IAM, S3, Lambda, SNS)

Version Control: Git, GitHub

Containerization: Docker

Monitoring: Grafana

Database: PostgreSQL, DBeaver

Programming: Python, SQL

Scripting: Shell Scripting

Currently Learning: Kubernetes, Ansible

PROJECTS

Agri Gear Rentals

Developed a Flask-based agricultural equipment rental platform with authentication, booking, cart management and SQLite database.

Dockerized Flask Application

Containerized a Flask application using Docker and published images to Docker Hub.

AWS EC2 Web Server Deployment

Deployed and configured a web server on AWS EC2 with Linux and Nginx.

GitHub Actions CI/CD

Created a basic CI/CD workflow to automate application build processes.

CERTIFICATIONS

- Python Full Stack with DevOps – PySpiders
- DevOps Fundamentals – Simplilearn
- Introduction to Kubernetes – Simplilearn
